

Searching Using Concepts

Concept Search Overview

You are able to search for news by *concept* in AP Exchange. We organized a number of concept searches based on issues most newsrooms cover today.

A concept search is a time-saver. Journalists can gather all news on a specific issue with one, quick search in AP Exchange.

Performing a Concept Search

The concepts that are now live are listed below. To run a concept search, preface the search with *subjectname=* and then add the concept. For example, to find all news on women's health, type *subjectname="women's health"*.

Note: If the concept contains two or more words, enclose the concept in quotation marks (" ").

Be sure to check out our blog at <http://apexchange.ning.com> for updates to this list.

Concepts:

Accidents	Games
Aerospace technologies	Golf
Agricultural technologies	Green technologies
Alternative medicine	Health care costs
